Key Findings

On a single night in 2020, roughly 580,000 people were experiencing homelessness in the United States. Six in ten (61%) were staying in sheltered locations—emergency shelters or transitional housing programs—and nearly four in ten (39%) were in unsheltered locations such as on the street, in abandoned buildings, or in other places not suitable for human habitation.

For the fourth consecutive year, homelessness increased nationwide. Between 2019 and 2020, the number of people experiencing homelessness increased by two percent. This increase reflects a seven percent increase in people staying outdoors, which more than offset the modest (0.6%) decline in people staying in sheltered locations.

Nearly 6 of every 10 people experiencing unsheltered homelessness did so in an urban area, with more than half of all unsheltered people counted in the Continuums of Care (CoCs) that encompass the nation's 50 largest cities (53%). More than one in five people who experienced unsheltered homelessness was in a CoC with a largely suburban population (22%), and one in five was in a largely rural area (20%).

2020 marks the first time since data collection began that more individuals experiencing homelessness were unsheltered than were sheltered. Between 2019 and 2020, the number of unsheltered individuals increased by seven percent while the number of sheltered individuals remained largely unchanged. Increases in the unsheltered population occurred across all geographic categories.

The number of unsheltered people in families with children increased for the first time since data collection began. In 2020, just under 172,000 people in families with children were experiencing homelessness. While most people in families with children were in sheltered locations (90%), the number of unsheltered people in families increased by 13 percent. This increase offset a decline in sheltered people in families with children, so the overall level of family homelessness was essentially the same in 2020 as in 2019.

Between 2019 and 2020, the number of unsheltered veterans increased by six percent, offset by a three percent decline in sheltered veterans. Overall, the

number of veterans experiencing homelessness remained unchanged, following considerable reductions in the population in prior years. Increases in unsheltered veterans occurred in all geographic types.

On a single night in 2020, 34,000 people under the age of 25 experienced homelessness on their own as “unaccompanied youth.” Most (90%) were between the ages of 18 and 24. Compared to all individuals experiencing homelessness, unaccompanied youth were more often non-white (52% of youth vs. 46% of all individuals), Hispanic/Latino (25% vs. 20%), female (39% vs. 29%), or identifying themselves other than as male or female (4% vs. 1%).

The number of individuals with chronic patterns of homelessness increased by fifteen percent between 2019 and 2020. While increases were reported among both sheltered and unsheltered populations, the sizable increase in the number of unsheltered people with chronic patterns of homelessness (21%) was the key driver.

African Americans and indigenous people (including Native Americans and Pacific Islanders) remained considerably overrepresented among the homeless population compared to the U.S. population. People identifying as black or African American accounted for 39 percent of all people experiencing homelessness and 53 percent of people experiencing homelessness as members of families with children but are 12 percent of the total U.S. population. Together, American Indian, Alaska Native, Pacific Islander and Native Hawaiian populations account for one percent of the U.S. population, but five percent of the homeless population and seven percent of the unsheltered population. In contrast, 48 percent of all people experiencing homelessness were white compared with 74 percent of the U.S. population. People identifying as Hispanic or Latino (who can be of any race) are about 23 percent of the homeless population but only 16 percent of the population overall.

Definition of Terms

Please note: Key terms are used for AHAR reporting purposes and accurately reflect the data used in this report. Definitions of these terms may differ in some ways from the definitions found in the Homeless Emergency Assistance and Rapid Transition to Housing (HEARTH) Act and in HUD regulations.

Chronically Homeless Individual refers to an individual with a disability who has been continuously homeless for one year or more or has experienced at least four episodes of homelessness in the last three years where the combined length of time homeless on those occasions is at least 12 months.

Chronically Homeless People in Families refers to people in families in which the head of household has a disability and has either been continuously homeless for one year or more or has experienced at least four episodes of homelessness in the last three years where the combined length of time homeless on those occasions is at least 12 months.

Continuums of Care (CoC) are local planning bodies responsible for coordinating the full range of homelessness services in a geographic area, which may cover a city, county, metropolitan area, or an entire state.

Emergency Shelter is a facility with the primary purpose of providing temporary shelter for homeless people.

Homeless describes a person who lacks a fixed, regular, and adequate nighttime residence.

Housing Inventory Count (HIC) is produced by each CoC and provides an annual inventory of beds that assist people in the CoC who are experiencing homelessness or leaving homelessness.

Individual refers to a person who is not part of a family with children during an episode of homelessness. Individuals may be homeless as single adults, unaccompanied youth, or in multiple-adult or multiple-child households.

Other Permanent Housing is housing with or without services that is specifically for people who formerly experienced homelessness but that does not require people to have a disability.

Parenting Youth are people under age 25 who are the parents or legal guardians of one or more children (under age 18) who are present with or sleeping in the same place as that youth parent,

where there is no person over age 24 in the household.

Parenting Youth Household is a household with at least one parenting youth and the child or children for whom the parenting youth is the parent or legal guardian.

People in Families with Children are people who are experiencing homelessness as part of a household that has at least one adult (age 18 and older) and one child (under age 18).

Point-in-Time Counts are unduplicated one-night estimates of both sheltered and unsheltered homeless populations. The one-night counts are conducted by CoCs nationwide and occur during the last week in January of each year.

Permanent Supportive Housing (PSH) is a housing model designed to provide housing assistance (project- and tenant-based) and supportive services on a long-term basis to people who formerly experienced homelessness. HUD's Continuum of Care program, authorized by the McKinney-Vento Act, funds PSH and requires that the client have a disability for eligibility.

Rapid Rehousing is a housing model designed to provide temporary housing assistance to people experiencing homelessness, moving them quickly out of homelessness and into permanent housing.

Safe Havens provide temporary shelter and services to hard-to-serve individuals.

Sheltered Homelessness refers to people who are staying in emergency shelters, transitional housing programs, or safe havens.

Transitional Housing Programs provide people experiencing homelessness a place to stay combined with supportive services for up to 24 months.

Unaccompanied Homeless Youth (under 18) are people in households with only children who are not part of a family with children or accompanied by their parent or guardian during their episode of homelessness, and who are under the age of 18.

Unaccompanied Homeless Youth (18-24) are people in households without children who are not part of a family with children or accompanied by their parent or guardian during their episode of homelessness and who are between the ages of 18 and 24.

Unsheltered Homelessness refers to people whose primary nighttime location is a public or private place not designated for, or ordinarily used as, a regular sleeping accommodation for people (for example, the streets, vehicles, or parks).

Veteran refers to any person who served on active duty in the armed forces of the United States. This includes Reserves and National Guard members who were called up to active duty.

About This Report

The US Department of Housing and Urban Development (HUD) releases the Annual Homeless Assessment Report to Congress (AHAR) in two parts. Part 1 provides Point-in-Time (PIT) estimates, offering a snapshot of homelessness—both sheltered and unsheltered—on a single night. The one-night counts are conducted during the last 10 days of January each year. The PIT counts also provide an estimate of the number of people experiencing homelessness within particular homeless populations such as individuals with chronic patterns of homelessness and veterans experiencing homelessness.

To understand our nation's capacity to serve people who are currently or formerly experiencing homelessness, this report also provides counts of beds in emergency shelters, transitional housing programs, safe havens, rapid rehousing programs, permanent supportive housing programs, and other permanent housing.

In 2020, the PIT estimates of people experiencing homelessness in sheltered and unsheltered locations, as well as the number of beds available to serve them, were reported by 396 Continuums of Care (CoC) nationwide. These 396 CoCs covered virtually the entire United States.

To better understand how homelessness differs by geography, the AHAR study team categorized CoCs into four groups:

1. Major city CoCs
2. Other largely urban CoCs
3. Largely suburban CoCs
4. Largely rural CoCs

First, CoCs representing the 50 most populous cities in the United States were assigned to the major city CoC category. Next, the study team used geographic data published by the U.S. Department of Education's National Center for Education Statistics (NCES)¹ to determine the urbanicity of the remaining CoCs. NCES defines 12 geographic locales, which were collapsed into three distinct categories: urban (mapping to the three NCES "City" locales), suburban (mapping to the three NCES "Suburban" locales, as well as the "Town – Fringe" locale), and rural (mapping to the three NCES

"Rural" locales, as well as the "Town – Distant" and "Town – Remote" locales).² Using the percentage of each CoC's total population³ living in urban, suburban, and rural areas, based on the NCES geographic data, CoCs were classified into categories according to its largest percentage among the three.

In other words, a CoC where a plurality of its population lives in rural areas would be classified as a "largely rural CoC." That would not imply, however, that all people experiencing homelessness in the largely rural CoC were counted in rural areas. CoCs span large territories (even an entire state in some cases) and may comprise a mixture of urban, suburban, and rural areas. Because PIT estimates are reported for an entire CoC, each person experiencing homelessness in the CoC cannot be classified as staying in an urban, suburban, or rural area. Rather, all people experiencing homelessness in the CoC are classified as staying in a CoC that is largely urban, suburban, or rural.⁴

HUD has methodological standards for conducting the PIT counts, and CoCs use a variety of approved methods to produce the counts. The guide for PIT methodologies can be found here: <https://www.hudexchange.info/resource/4036/point-in-time-count-methodology-guide>. HUD reviews the data for accuracy and quality prior to creating the estimates for this report.

The point-in-time counts of homelessness and the housing inventory information are based on data from January 2020 so do not reflect the health or economic consequences of the COVID-19 pandemic for levels of homelessness or characteristic of people experiencing homelessness. The impacts of the pandemic on homelessness will be explored in future reports.

2 Definitions for each of the 12 NCES locales are available in the Locale Boundaries User's Manual: https://nces.ed.gov/programs/edge/docs/EDGE_NCES_LOCALE_FILEDOC.pdf

3 The study team used population counts from the Census Bureau's 2010 block-level data. Census blocks are the smallest geographic unit for which the Census reports population counts, and they are the ideal unit for this CoC analysis. Block-level population data are only available in the decennial census reports.

4 The median percentage of the population living in urban areas among major city CoCs was 70 percent. The median urban percentage among other CoCs classified as largely urban was 58 percent. The median suburban percentage among CoCs classified as largely suburban was 65 percent, and the median rural percentage among CoCs classified as largely rural was 71 percent.

1 The study team used NCES data from the 2017–2019 school year (the most recent data available when the CoC categories were developed).

Estimates of Homelessness IN THE UNITED STATES

1 National Estimates Homelessness in the United States

Data source: PIT 2007-2020

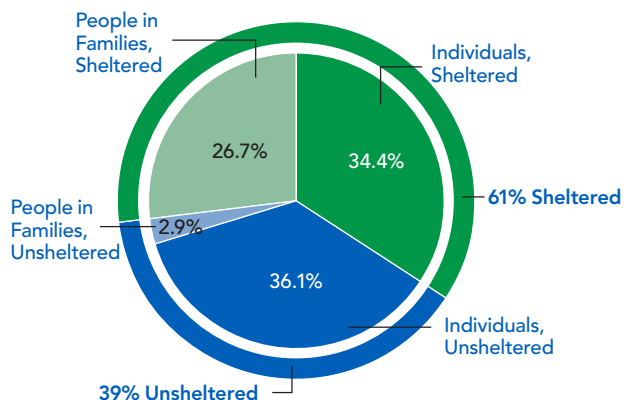

**EXHIBIT 1.1: PIT Estimates of People Experiencing Homelessness
By Sheltered Status, 2007–2020**

On a Single Night in January 2020

- 580,466 people – about 18 of every 10,000 people in the United States – experienced homelessness across the United States.
- Six in 10 people experiencing homelessness (61%), were staying in sheltered locations, and nearly four in 10 (39%) were unsheltered.
- More than two-thirds of all people experiencing homelessness were in households with only adults (70%). Households with only adults who were staying in unsheltered locations comprised the largest single segment of the total homeless population (36%), followed by individuals staying in shelters (34%). Thirty percent of people experiencing homelessness did so as part of a family with at least one adult and one child under 18 years of age, and most people in families were sheltered.
- Less than one percent of people experiencing homelessness, 3,598 people, were children under 18 without an adult present.

**EXHIBIT 1.2: Homelessness
By Household Type and Sheltered Status, 2020**

**EXHIBIT 1.3: Change in Number of People Experiencing Homelessness
2007–2020**

	Change 2019–2020		Change 2010–2020		Change 2007–2020	
	#	%	#	%	#	%
Total	12,751	2.2%	-56,611	-8.9%	-66,792	-10.3%

Unsheltered	14,787	7.0%	-7,454	-3.2%	-29,777	-11.6%

**EXHIBIT 1.4: Change in Homelessness
By Age and Sheltered Status, 2019–2020**

	All Homeless People		Sheltered People		Unsheltered People	
	#	%	#	%	#	%
Total						
Under 18	-705	-0.7%	-1,440	-1.5%	735	7.4%
18 to 24	-386	-0.8%	-627	-2.2%	241	1.4%
Over 24	13,842	3.3%	31	0.0%	13,811	7.5%

Changes over Time

- The number of people experiencing homelessness nationwide increased by two percent between 2019 and 2020, or 12,751 more people. This marks the fourth consecutive year that total homelessness has increased in the United States.
- The overall increase was driven by increases in the unsheltered homeless population. Between 2019 and 2020, the number of people counted in unsheltered locations rose by seven percent or 14,787 people. The number of people staying in shelter remained largely unchanged between 2019 and 2020, declining by less than one percent (2,036 fewer people).
- Despite recent increases, the number of people experiencing homelessness on a single night in January is 10 percent lower (66,792 fewer people) than it was in 2007, when these data were first reported.
- Unsheltered homelessness declined by 12 percent (29,777 fewer people) over the longer period, despite the fact that unsheltered homelessness has increased substantially over

the past five years, with 52,812 more people experiencing unsheltered homelessness in 2020 than in 2015.

- Sheltered homelessness has declined each year since 2014, and was 10 percent lower in 2020 than in 2007.

Demographic Characteristics of All People Experiencing Homelessness

- The demographic characteristics of people experiencing homelessness vary considerably by household type and shelter status and reflect the large percentage of individuals among the total homeless population. Detailed characteristics are shown separately for individuals in Section 2 of this report and for families with children in Section 3.
- Across both household and shelter types, nearly three-quarters of people experiencing homelessness were adults aged 25 or older (428,859 people), 18 percent were children under the age of 18 (106,364 children). Eight percent were young adults aged 18 to 24 (45,243 young adults).

1 National Estimates Homelessness in the United States

Data source: PIT 2007-2020

- Adults aged 25 or older were almost nine of every ten people experiencing unsheltered homelessness, 88 percent of the total number of unsheltered people.
- Children – either in families or on their own – were most often staying in sheltered locations (90%) with only 10,651 children counted in unsheltered locations.
- The gender characteristics of all people experiencing homelessness reflected the high percentage of men in the individual homeless population. Six of every 10 people experiencing homelessness were men or boys (61% or 352,211 men and boys), 39 percent were women or girls (223,578 women and girls), and less than one percent were transgender (3,161 people) or gender-nonconforming (1,460 people).
- Almost 4 of every 10 people experiencing homelessness in January 2020 were black or African American (39% or 228,796 people). A higher percentage of people in shelter were black or African American (47% or 167,205 people) than were people experiencing homelessness in unsheltered locations (27% or 61,591).
- Almost half of all people experiencing homelessness were white (48% or 280,612 people), and white people made up somewhat more than half of the unsheltered population (57%).
- Almost a quarter of all people experiencing homelessness, 23 percent, were Hispanic or Latino (counting people of all races who identify as Hispanic or Latino). The proportion is similar for people staying in sheltered and unsheltered locations (22% and 24%).

EXHIBIT 1.5: Demographic Characteristics of People Experiencing Homelessness 2020

Characteristic	All Homeless People		Sheltered People		Unsheltered People	
	#	%	#	%	#	%

Multiple Races	35,680	6.1%	19,380	5.5%	16,300	7.2%

Changes in Demographic Characteristics of All People Experiencing Homelessness

- National increases in homelessness were driven by increases in the unsheltered population, particularly in the number of people over the age of 25 who were staying outside. The number of unsheltered children increased by only 735, and the number of unsheltered young adults (aged 18 to 24) increased by 241 people. Meanwhile, the number of unsheltered people 25 and older increased by 13,811 people.
- Unsheltered homelessness rose by eight percent among men and boys (10,904 more men and boys), and by seven percent among women and girls (4,197 more women and girls). The small numbers of people in unsheltered locations identifying as transgender or as gender non-conforming dropped slightly (270 fewer people identified as transgender and 44 fewer as gender non-conforming).
- Between 2019 and 2020, the percentage of people experiencing homelessness who were white increased by four percent overall. The number of white people in sheltered locations remained essentially the same, but the number who were unsheltered increased by eight percent, with 9,485 more white people found in unsheltered locations.
- Unsheltered homelessness also increased among African Americans, by nine percent or 5,210 people.
- The number of Hispanic or Latino people experiencing homelessness increased by five percent. This reflects a considerable increase in the number of Hispanic/Latino unsheltered people, which increased by 10 percent between 2019 and 2020.

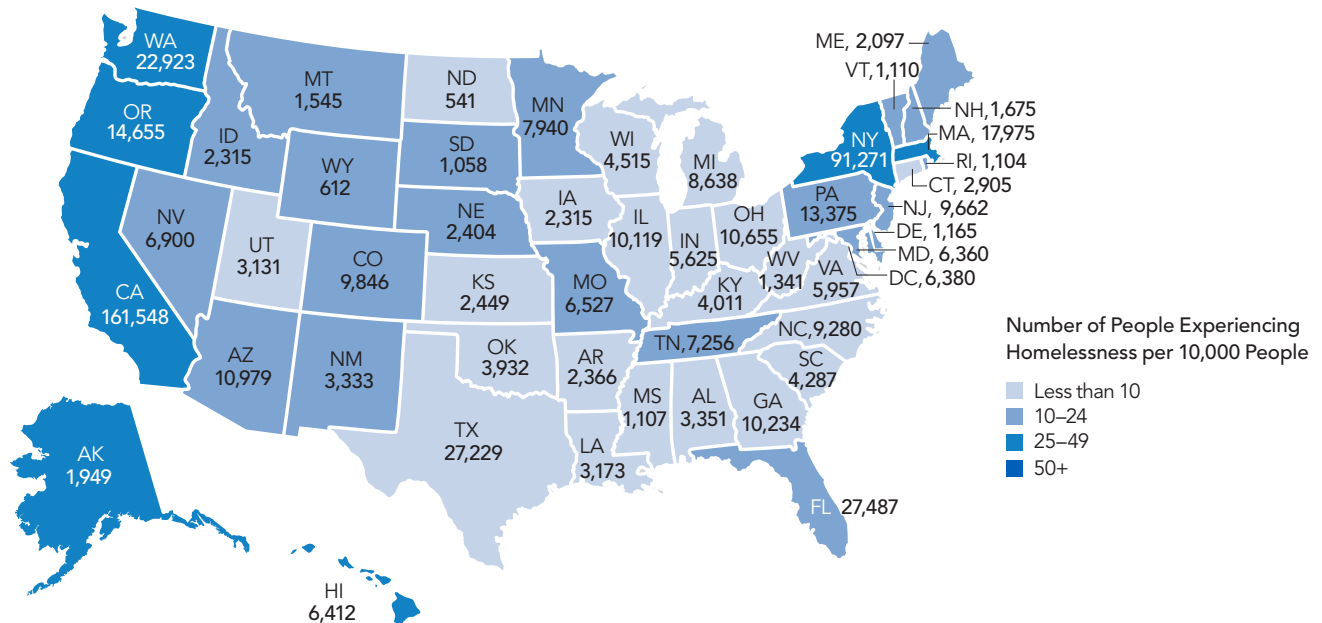

1 State Estimates

Homelessness in the United States

Data source: PIT 2007-2020; Excludes Puerto Rico and U.S. territories

EXHIBIT 1.6: Estimates of People Experiencing Homelessness
By State, 2020

On a Single Night in January 2020

- More than half of all people experiencing homelessness in the country were in four states: California (28% or 161,548 people); New York (16% or 91,271 people); Florida (5% or 27,487 people); and Texas (5% or 27,229).
- California accounted for more than half of all unsheltered people in the country (51% or 113,660 people). This is nearly nine times the number of unsheltered people in the state with the next highest number, Texas. In the 2020 point-in-time count, Texas reported 13,212 people or just six percent of the national total of people in unsheltered locations.
- New York and Hawaii had the highest rates of homelessness, at 47 and 46 people for every 10,000 people in the state. California and Oregon also had very high rates, with 41 and 35 people per 10,000. While Florida and Texas contributed large numbers of homeless people to the national estimates, they had rates of homelessness lower than the national average

of 18 people per 10,000 (13 for every 10,000 people in Florida and 9 for every 10,000 people in Texas).

- States in the West reported the highest percentages of all people experiencing homelessness in unsheltered locations. In California, 70 percent of people experiencing homelessness did so outdoors. Other states with more than half of their homeless population counted in unsheltered locations were: Oregon (61%), Nevada (61%), Hawaii (57%), Arkansas (54%), and Arizona (50%).
- Only one state—New York—sheltered at least 95 percent of people experiencing homelessness.

Changes over Time

- Unlike in prior years, when the rise in the national homeless population reflected large increases in only about a fifth of all states, between 2019 and 2020 the number of people experiencing homelessness increased in

EXHIBIT 1.7: States with the Highest and Lowest Percentages of People Experiencing Homelessness who were Unsheltered
2020

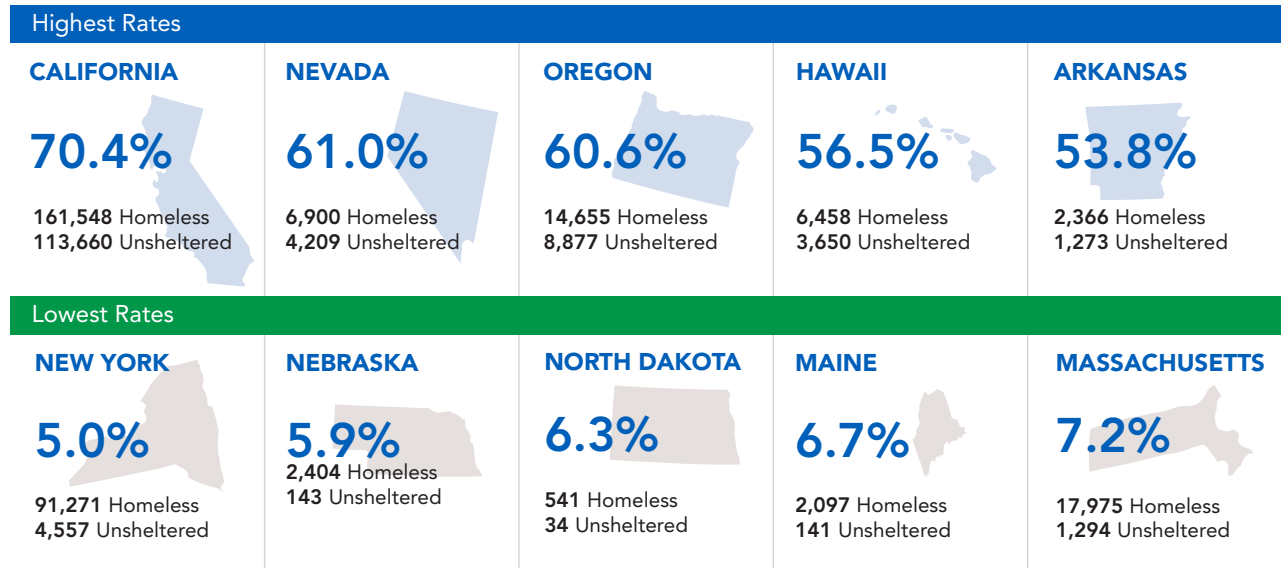

EXHIBIT 1.8: Largest Changes in Homelessness by State
By State, 2007–2020

2019–2020		2007–2020	
Largest Increases			
CALIFORNIA	10,270 / 6.8%	NEW YORK	28,670 / 45.8%
TEXAS	1,381 / 5.3%	CALIFORNIA	22,562 / 16.2%
WASHINGTON	1,346 / 6.2%	MASSACHUSETTS	2,848 / 18.8%
ARIZONA	972 / 9.7%	DISTRICT OF COLUMBIA	1,060 / 19.9%
NEW JERSEY	800 / 9.0%	MINNESOTA	617 / 8.4%
Largest Decreases ^a			
OREGON	-1,221 / -7.7%	FLORIDA	-20,582 / -42.8%
FLORIDA	-841 / -3.0%	TEXAS	-12,559 / -31.6%
NEW YORK	-820 / -0.9%	GEORGIA	-9,405 / -47.9%
MASSACHUSETTS	-496 / -2.7%	NEW JERSEY	-7,652 / -44.2%
ARKANSAS	-351 / -12.9%	ILLINOIS	-5,056 / -32.6%

^a Due to methodological changes, Colorado, North Dakota, South Dakota, Michigan, and Wyoming were excluded from the list of largest decreases between 2007 and 2020.

State Estimates

Homelessness in the United States

more states than it decreased. Homelessness increased in 30 states and decreased in 19 states and the District of Columbia. One state (Idaho) reported no change.

- States with the largest absolute increases in homelessness between 2019 and 2020 were California (10,270 more people), Texas (1,381), and Washington (1,346). States with the largest percentage increases between 2019 and 2020 were: Delaware (27%), New Hampshire (20%), Iowa (14%) and Montana (14%).
- Between 2019 and 2020, states with the largest absolute decreases in people experiencing homelessness were Oregon (1,221 fewer people), Florida (841), and New York (820). States with the largest percentage decreases were Arkansas (13% fewer people), Oregon (8%), and Mississippi (7%).
- Over the longer period during which these data have been reported, 2007-2020, the number of people experiencing homelessness declined in 34 states. The largest absolute decreases were in Florida (20,582 fewer people) and Texas (12,559 fewer people). The largest percentage decreases were in Kentucky (50%), Georgia (48%), West Virginia (44%) and New Jersey (44%).
- Between 2007 and 2020, the number of people experiencing homelessness increased in 16 states, plus the District of Columbia. The largest absolute increases were in New York (28,670 more people) and California (22,562 more people). New York also had the largest percentage increase (46%), followed by Idaho (32%) and the District of Columbia (20%).

1 Estimates by CoC

Homelessness in the United States

Data source: PIT 2007-2020; Excludes Puerto Rico and U.S. territories

Continuums of Care (CoC) were Divided into Four Geographic Categories

- 1. Major city CoCs (n=48)** cover the CoCs that contain one of the 50 largest cities in the United States. In two cases (Phoenix and Mesa, AZ, and Arlington and Fort Worth, TX), two large cities were located in the same CoC.
- 2. Other Largely Urban CoCs (n=59)** are CoCs in which the population predominantly resides in an urbanized area within a principal city within the CoC (but excludes the nation's largest cities).
- 3. Largely Suburban CoCs (n=171)** are CoCs in which the population predominantly resides in suburban areas, defined as urbanized areas outside of a principal city or urban clusters within 10 miles of urbanized areas.
- 4. Largely Rural CoCs (n=109)** are CoCs in which the population predominantly resides in urban clusters that are more than 10 miles from an urbanized area or in Census-defined rural territories.

Note: These definitions have been adapted from definitions used by the US Department of Education's National Center for Education Statistics to characterize the locations of schools. For information on how they were applied to CoCs, see the About this Report section of this report.

In 2020, one out of every four people experiencing homelessness did so in either New York City or Los Angeles.

EXHIBIT 1.9: Percent of People Experiencing Homelessness By CoC Category and Sheltered Status, 2020

On a Single Night in January 2020

- Slightly more than half of all people experiencing homelessness (52%) were in one of the nation's 50 largest cities. Nearly one-quarter of people experiencing homelessness were in a predominantly suburban CoC (24%), 18 percent were in largely rural CoCs, and the remainder (7%) were in largely urban CoCs that do not contain one of the 50 largest cities.
- One out of every four people experiencing homelessness in the United States did so in either New York City or Los Angeles. A majority of New York City's homeless population were people in families with children (53%), while a large majority of people experiencing homelessness in Los Angeles were individuals (or people in households without children) (81%).
- Largely rural CoCs had the largest percentage of people experiencing homelessness in unsheltered locations, 44 percent, followed by major city CoCs, 39 percent.
- In three major city CoCs, more than 75 percent of people experiencing homelessness were unsheltered. All three were in California: San Jose (83%), Long Beach (78%), and Oakland (78%).

EXHIBIT 1.10: All People Sheltered vs. Unsheltered by CoC Category
2020

- Ten largely rural CoCs reported unsheltered rates exceeding 75 percent, two with unsheltered rates above 90 percent: Lake County CA, located in Northwest California (94%) and the Jackson/West Tennessee CoC (93%). Eight largely suburban CoCs had unsheltered rates of 75 percent or higher, with Imperial County, CA – on the southern border of California – reporting the highest rate of its category (87%).

EXHIBIT 1.11: Percentage of People Experiencing Homelessness by Household Type and CoC Category
2020

Changes over Time

- Between 2019 and 2020, homelessness increased across all geographic categories, driven by increases in the number of people counted in unsheltered locations. The number of people experiencing homelessness increased by three percent (or 8,392 people) in major city CoCs and by two percent in largely suburban CoCs and largely rural CoCs.
- While unsheltered homelessness increased in all CoC categories between 2019 and 2020, major city CoCs and largely rural CoCs experienced the largest absolute and percentage increases, both with eight percent more people staying in unsheltered locations.
- Sheltered homelessness dropped in all CoC categories except those with major cities, where the number of sheltered homeless people was essentially the same in 2020 as in 2019.

EXHIBIT 2.1: PIT Estimates of Individuals Experiencing Homelessness
By Sheltered Status, 2007–2020

On a Single Night in January 2020

- 408,891 people experienced homelessness as individuals—that is, people in households that were not composed of both adults and children. Individuals were 70 percent of the total homeless population.
- Slightly over half of all people who experienced homelessness as individuals were staying in unsheltered locations, 51 percent or 209,413 people.

Changes in Individual Homelessness over Time

- The number of people experiencing homelessness as individuals increased for the fourth consecutive year. Between 2019 and 2020, individuals experiencing homelessness

increased by three percent (12,846 more people).

- The increase in individual homelessness between 2019 and 2020 was driven by an increase in the number of individuals experiencing unsheltered homelessness. While the number of sheltered individuals remained unchanged (53 fewer people), the number of unsheltered individuals increased by nearly seven percent or 12,899 more people. This is the sixth consecutive year the number of unsheltered individuals has increased.
- In 2020, for the first time, there were more unsheltered individuals than there were sheltered individuals (51% vs. 49%).
- Over a longer time period, 2007 to 2020, individual homelessness declined by one

Multiple Races	24,512	6.0%	9,367	4.7%	15,145	7.2%

percent (3,809 fewer people). This overall decline is driven by a six percent decline over time in the sheltered population. The unsheltered population has increased by five percent since 2007 (9,786 more people).

- The 2020 point-in-time count marks the first time since 2008 that the number of unsheltered individuals is higher than it was when reporting began in 2007.
- More than a quarter (27%) of individuals experiencing homelessness in 2020 and 35 percent of those found in unsheltered locations had chronic patterns of homelessness, meaning that they experienced homelessness for extended periods of time. (These individuals are discussed in detail in Section 6.)

Demographic Characteristics of Individual Homelessness

- The typical person experiencing homelessness as an individual in 2020 was 25 years of age or older (91%), a man (70%), identified his race as white (54%), and his ethnicity as non-Hispanic/non-Latino (80%).
- Very few people experiencing homelessness as individuals were young adults aged 18 to 24, just eight percent or 32,897 people.
- Just under three in ten individuals were women (29%), and one percent of individuals were transgender or gender non-conforming. In contrast, six in ten people experiencing homelessness in families with children were women (60%).
- More than five in ten people experiencing homelessness as individuals identified their race as white (54%), and about a third, 34 percent, identified as black or African American. African American individuals accounted for a higher percentage of sheltered individuals (41%) than of unsheltered individuals (27%).
- About 20 percent of all people experiencing homelessness as individuals in 2020 were Hispanic or Latino. Hispanic individuals were more likely to be in unsheltered locations than sheltered (23% vs. 16%). In contrast, among people experiencing homelessness in families with children, Hispanic individuals were a higher percentage of the sheltered than the unsheltered population (30% vs. 26%).

Changes in Demographics over Time

- People experiencing homelessness as individuals can be children under 18, transition-aged youth (18-24), or adults 25 and older. The increase in the number of individuals experiencing homelessness was driven entirely by an increase of 13,632 individuals ages 25 and older, a four percent increase between 2019 and 2020. Unsheltered individuals accounted for nearly all of this rise (13,304 people).
- In absolute numbers, homelessness increased more among individual men than among women homeless as individuals, 8,692 men vs. 4,380 women. The percentage increase among women was slightly higher than the percentage increase among men, 4 percent vs. 3 percent, but unsheltered homelessness increased at a higher rate for men, with 10,054 more individual men in unsheltered locations in 2020 than in 2019.
- The number of white people experiencing homelessness as individuals increased by five percent overall and by eight percent for white individuals found in unsheltered locations. The number of African American individuals experiencing homelessness also increased slightly, by one percent overall and six percent for unsheltered African American individuals. While the numbers were smaller, Native Americans experienced a five percent rise in individual homelessness (or 776 more people) and an eight percent rise in unsheltered individual homelessness (or 745 people).

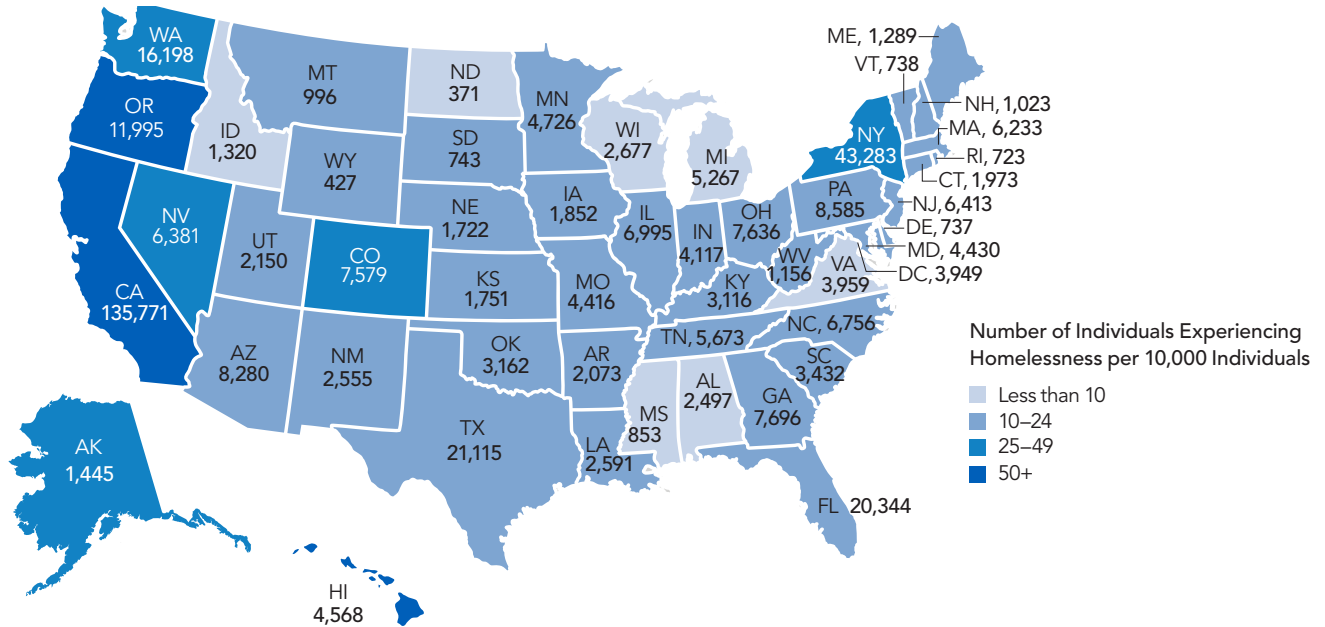

- Six percent more people identifying as Latino or Hispanic experienced homelessness as individuals in 2020 than in 2019 (4,640 more people). Driving these overall changes were an eight percent increase in unsheltered Hispanic individuals and a four percent increase in sheltered Hispanic individuals.

2

State Estimates Homeless Individuals

Data source: PIT 2007-2020; Excludes Puerto Rico and U.S. territories

**EXHIBIT 2.5: Estimates of Homeless Individuals
By State, 2020**

On a Single Night in January 2020

- One of every three people in the United States experiencing homelessness as an individual was found in California, 34 percent. California accounted for more than half (52%) of all individuals counted in unsheltered locations.
- Other states with large numbers of homeless individuals were New York (11% of the national total or 43,283 people), Texas (5% or 21,115 people), and Florida (5% or 20,344).

- In two states, more than 70 percent of individuals experiencing homelessness were staying in unsheltered locations: California (79%) and Hawaii (71%).
- In contrast, more than 88 percent of people experiencing homelessness as individuals were sheltered in five states: Nebraska, North Dakota, New York, Maine, and Wisconsin.

Changes over Time

- The number of individuals experiencing homelessness increased in more than half of all states between 2019 and 2020, 35 states and the District of Columbia. The largest absolute increase was in California (6,994 people), followed by Texas (1,504 people) and New York (1,170 people). The states with the largest percentage increases were Delaware (30%), New Hampshire (26%), and Iowa (18%).
- Between 2019 and 2020, the number of

2020 marks the first time that there were more unsheltered individuals than there were sheltered individuals.

2

National Estimates Homeless Individuals

homeless individuals declined in 15 states. The largest absolute declines occurred in Florida (921 fewer people) and Oregon (359 fewer people). The largest percentage declines were in Idaho (13%), Mississippi (11%), and Arkansas (10%).

- Over the longer period, 2007-2020, the number of individuals experiencing homelessness increased in 25 states and the District of Columbia. The largest absolute increases were in California (24,819 more people or 22%) and New York (15,227 more people or 54%).
- During the same time period, 25 states experienced a decline in the number of homeless individuals. The largest declines were reported in Florida (12,696 fewer people or 38%) and Texas (5,191 fewer people or 20%).

2

Estimates by CoC Homeless Individuals

Data source: PIT 2007-2020; Excludes Puerto Rico and U.S. territories

Continuums of Care (CoC) were divided into four geographic categories

- 1. Major city CoCs (n=48)** are CoCs that contain one of the 50 largest cities in the United States. In two cases, Phoenix and Mesa, AZ, and Arlington and Fort Worth, TX, two of the largest U.S. cities are located in the same CoC.
- 2. Other largely urban CoCs (n=59)** are CoCs in which the population lives predominately in an urbanized area within the CoC's principal city or cities, but the CoCs does not include one of the nation's 50 largest cities.
- 3. Largely suburban CoCs (n=171)** are CoCs in which the population lives predominantly in suburban areas, defined as urbanized areas outside of a principal city or urban clusters within 10 miles of urbanized areas.
- 4. Largely rural CoCs (n=109)** are CoCs in which the population lives predominantly in urban clusters that are more than 10 miles from an urbanized area or in Census-defined rural areas.

Note: These definitions have been adapted from definitions used by the U.S. Department of Education's National Center for Education Statistics to characterize the locations of schools. For detailed information on how they were applied to CoCs, see the About the Report section of this report.

EXHIBIT 2.8: Percent of Homeless Individuals By CoC Category and Sheltered Status, 2020

EXHIBIT 2.9: Sheltered vs. Unsheltered Individuals By CoC Category and Sheltered Status, 2020

On a Single Night in January 2020

- More than half of all people experiencing homelessness as individuals (52%) did so in a major city. Nearly one-quarter of individuals experiencing homelessness (23%) were in largely suburban areas.
- Los Angeles had the largest number of individuals experiencing homelessness, 51,290 people, followed by New York City, 36,394. The order is reversed for all people experiencing homelessness, as New York City has large numbers of homeless people in families.
- Major city CoCs accounted for 54 percent of the national total of unsheltered individuals and 50 percent of the national total of sheltered individuals. Major cities and largely rural CoCs had the highest percentages of individuals experiencing homelessness counted in unsheltered locations, both with 53 percent. Other largely urban CoCs (those that do not contain one of the nation's largest cities) and largely suburban CoCs sheltered somewhat more than half of individuals experiencing homelessness.
- In five major city CoCs, more than 80 percent of homeless individuals were unsheltered: San Jose (87%), Los Angeles (84%), Fresno (84%), Oakland (82%), and Long Beach (81%).
- Twelve largely suburban CoCs reported rates of unsheltered individuals greater than 80 percent, with two reporting rates of over 90 percent: Ft. Pierce, FL (93%) and Imperial County, CA (92%).

EXHIBIT 2.10: Demographic Characteristics of Homeless Individuals by CoC Category
2020

Pacific Islander	1.2%	0.7%	1.7%	0.9%
Multiple Races	6.2%	6.4%	5.8%	4.5%

- Thirteen largely rural CoCs reported unsheltered rates above 80 percent, with Hendry, Hardee, and Highlands Counties, which about Lake Okeechobee in Florida, reporting all individuals experiencing homelessness staying in unsheltered locations. Other CoCs with rates over 90 percent were: Gulf Port, MS (97%), Lake County in Northwest California (96%), the CoC on the California-Nevada border comprised of Alpine, Inyo, and Mono Counties (96%), and the Jackson/West Tennessee CoC (93%).

Demographic Differences by CoC Category

- Individuals experiencing homelessness in largely rural CoCs were somewhat more likely to be women (33%) than those in a major city, other urban, or suburban CoCs.
- Nearly three in four of people experiencing homelessness as individuals in largely rural areas were white (73%) compared with 44 percent in major city CoCs. Conversely, African Americans account for 44 percent of individuals experiencing homelessness in major cities compared with only 15 percent in rural areas.
- In largely rural CoCs, seven percent of individuals experiencing homelessness were Native Americans or Pacific Islanders, the

2

Estimates by CoC Homeless Individuals

Data source: PIT 2007-2020; Excludes Puerto Rico and U.S. territories

EXHIBIT 2.11: CoCs with the Largest Numbers of Homeless Individuals by CoC Category 2020

CoC Name	Homeless Individuals	CoC Name	Homeless Individuals
Major City CoCs		Other Largely Urban CoCs	
Los Angeles City & County CoC, CA	51,290	Santa Rosa, Petaluma/Sonoma County, CA	2,510
New York City	36,394	St. Petersburg, Clearwater, Largo/Pinellas County, FL	1,876
San Jose/Santa Clara City & County, CA	8,802	Oxnard, San Buenaventura/Ventura County, CA	1,574
Seattle/King County, WA	8,008	Eugene, Springfield/Lane County, OR	1,362

highest percentage of indigenous people of the geographic categories.

- In major city CoCs, nearly one quarter of individuals experiencing homelessness were Hispanic or Latino (24%), a higher proportion than were reported in other largely urban, largely suburban, and largely rural CoCs, which ranged from 11 to 17 percent.

Changes over Time by CoC Category

- Homelessness among individuals increased across most CoC categories and shelter statuses. The largest absolute increase was in major cities, where 5,859 more individuals were

counted in 2020 than in 2019, an increase of 3 percent. Largely suburban areas experienced the largest percentage increase, 5 percent or 4,282 people.

- All CoC categories reported increases in the number of unsheltered individuals. Major cities reported 5,815 more individuals staying outside, followed by largely suburban CoCs, with 3,530 more unsheltered individuals.
- Modest declines in sheltered individuals in other urban CoCs and largely rural CoCs were more than offset by these increases in the unsheltered population in those places.
- While the number of individuals experiencing homelessness increased nationally, 40 percent of communities experienced decreases or no change in the number of homeless individuals between 2019 and 2020.

Between 2019 and 2020, the number of individuals experiencing homelessness increased in all CoC types.

3 National Estimates Homeless Families with Children

Data source: PIT 2007-2020

EXHIBIT 3.1: PIT Estimates of Homeless People in Families with Children
By Sheltered Status, 2007–2020

On a Single Night in January 2020

- 171,575 people experienced homelessness as part of a family with at least one adult and one child under the age of 18, 30 percent of the total homeless population.
- Nine in ten people experiencing homelessness in families with children were sheltered, 154,908 people. Only 10 percent of people in families with children, 16,667 people, were found in unsheltered locations.

- The average family size was 3.2 people, and just under 54,000 family households were experiencing homelessness.

Changes in Family Homelessness over Time

- The overall number of people in families with children who were experiencing homelessness on a single night was essentially the same in 2019 and 2020, following year-to-year declines

Parenting Youth (Under 18)	125	95	220
Parenting Youth Age (18 to 24)	7,230	9,400	16,630
Total Parenting Youth	7,355	9,495	16,850

- over the previous several years.
- The number of people in families who were experiencing homelessness in 2020 was 27 percent lower than in 2007, 62,983 fewer people. The number of family households that were experiencing homelessness dropped by 32 percent over that period, 24,796 fewer households.
- The overall decline in family homelessness between 2007 and 2020 reflects a substantial decrease in families experiencing

- homelessness in unsheltered locations. Between 2007 and 2020, unsheltered family homelessness declined by 70 percent (39,563 fewer people). The number of people in families with children staying in shelters dropped by 13 percent (23,420 fewer people).
- While considerably lower in 2020 than in 2007, the number of unsheltered people in families with children increased between 2019 and 2020 for the first time since these data were collected.

3

National Estimates Homeless Families with Children

Data source: PIT 2007-2020

Demographic Characteristics of Family Homelessness

- Children under the age of 18 made up 60 percent of people experiencing homelessness in families in 2020. Another 33 percent were adults over the age of 24, and seven percent were young adults between 18 and 24 years of age.
- Some people in the 18 to 24-year-old age group were the parent of the family (59 percent), while 41 percent were young adults in a family with another adult and at least one child under 18.
- Families found in unsheltered locations had fewer children than those found in shelter. Of people in families found in unsheltered locations, 53 percent were under 18 years of age, compared to 61 percent of those found in shelter.
- Six in 10 people in families were women and girls, and about four in 10 were men and boys. Women and girls were somewhat less likely to be found in unsheltered locations.
- Of people in families experiencing homelessness in 2020, 53 percent were black or African American, and 35 percent were white, with the remaining 12 percent identifying as another race or multiple races.
- People identifying as white made up 34 percent of sheltered families but 46 percent of unsheltered families.
- People who were Native American or Pacific Islander made up larger percentages of family members experiencing homelessness in unsheltered than in sheltered locations (13% vs. 3%).
- Nearly 3 in 10 people in families with children experiencing homelessness were Hispanic/Latino (29% or 50,177 people).

Changes in Demographics of Family Homelessness over Time

- Between 2019 and 2020, homelessness remained largely unchanged for all age groups, with an overall decline of just 0.1 percent (95 fewer people).
- The small increase in unsheltered homelessness among people in families between 2019 and 2020 affected all age groups, but the largest increase was for children under the age of 18, 1,053 more children (a 14% increase).
- The number of women and girls in families experiencing homelessness declined by 2 percent (1,646 fewer women and girls) in sheltered locations and increased by 12 percent (933 more women and girls) in unsheltered locations. Similarly, the number of men and boys in families experiencing homelessness declined by one percent (518 fewer people) in sheltered locations and increased by 12 percent (850 more people) in unsheltered locations.
- Family homelessness increased by two percent among people who were Hispanic or Latino (1,093 more people). This was driven by a 46 percent increase, 1,353 more people in unsheltered homelessness. Sheltered homelessness for Hispanic people in families decreased by one percent (260 fewer people).
- Family homelessness increased for African Americans by two percent (1,738 more people) and stayed essentially the same for people who were white (243 fewer people). Sheltered family homelessness among people who were black or African American decreased by one percent (502 fewer people), while unsheltered homelessness increased by 73 percent (2,240 more people).

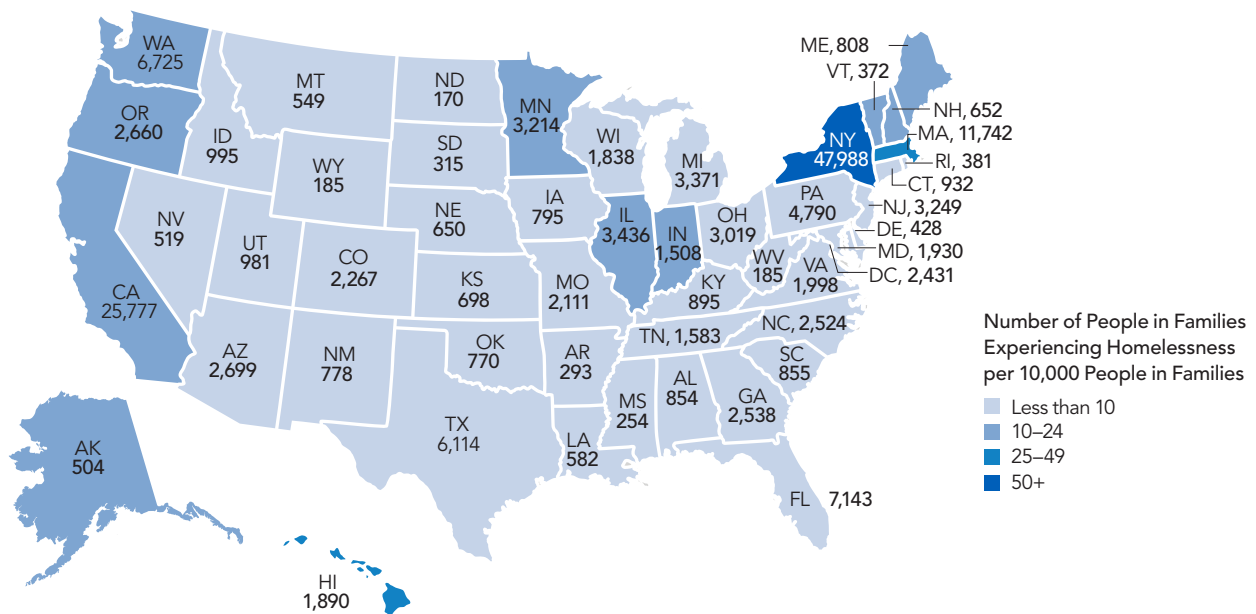

3 State Estimates

Homeless Families with Children

Data source: PIT 2007-2020; Excludes Puerto Rico and U.S. territories

EXHIBIT 3.5: Estimates of Family Homelessness
By State, 2020

On a Single Night in 2020

- Half of all people experiencing homelessness as part of a family with children were in three states: New York, California, and Massachusetts. About 3 in 10 (28%) were in New York (47,988 people), and they were essentially all sheltered. Seven percent (11,742 people) were in Massachusetts and, similarly, virtually all were sheltered.
- California accounted for 15 percent of people in families experiencing homelessness in the U.S. This was a much lower percentage than for people homeless as individuals, 34 percent of whom were in California. In California, 24 percent of people experiencing homelessness as part of a family were unsheltered.
- Washington, Oregon, and Florida also have substantial number of people in families found in unsheltered locations, 1,884 in Washington, 1,405 in Oregon, and 1,210 in Florida. Idaho, Tennessee, and South Carolina, have smaller numbers of people experiencing homelessness

as part of a family but high rates at which homeless families found in unsheltered locations.

Changes over Time

- Between 2019 and 2020, homelessness experienced by people in families with children increased in 27 states. The largest absolute increases were in California (3,276 more people or 15%), Washington (1,133 more people or 20%), and New Jersey (282 more people or 10%).
- Family homelessness dropped between 2019 and 2020 in 23 states and the District of Columbia. The largest absolute decrease was in New York, with 1,990 fewer people homeless of part of a family in 2020 than in 2019.
- Over a longer period, 2007-2020, family homelessness increased in 6 states and the District of Columbia. The largest percentage increases were in Massachusetts, Idaho, and the District of Columbia. The largest absolute

State Estimates Homeless Families with Children

increases were in New York (or 13,443 more people, Massachusetts (4,907 more people, and the District of Columbia (828 more people).

- Between 2007 and 2020, family homelessness dropped in 44 states. The largest absolute decreases were in Florida (7,886 fewer people) and Texas (7,368 fewer people).

3 Estimates by CoC

Homeless Families with Children

Data source: PIT 2007-2020; Excludes Puerto Rico and U.S. territories

EXHIBIT 3.8: Percent of Homeless People in Families with Children
By CoC Category and Sheltered Status, 2020

EXHIBIT 3.9: Sheltered vs. Unsheltered People in Families with Children
By CoC Category, 2020

On a Single Night in January 2020

- More than half (53%) of all people in families with children experiencing homelessness in the United States did so in one of the nation's 50 largest cities. However, a much smaller share of unsheltered people in families with children were counted in major cities (36%) than sheltered people in families with children (55%). This is very different from the pattern for individuals, with 54 percent of unsheltered individuals found in major city CoCs.
- Nearly a quarter of all people in families with children experiencing homelessness in the

Continuums of Care (CoC) were divided into four geographic categories

- Major city CoCs (n=48)** are CoCs that contain one of the 50 largest cities in the United States. In two cases, Phoenix and Mesa, AZ, and Arlington and Fort Worth, TX, two of the largest U.S. cities are located in the same CoC.
- Other largely urban CoCs (n=60)** are CoCs in which the population lives predominately in an urbanized area within the CoC's principal city or cities, but the CoCs does not include one of the nation's 50 largest cities.
- Largely suburban CoCs (n=170)** are CoCs in which the population lives predominantly in suburban areas, defined as urbanized areas outside of a principal city or urban clusters within 10 miles of urbanized areas.
- Largely rural CoCs (n=114)** are CoCs in which the population lives predominantly in urban clusters that are more than 10 miles from an urbanized area or in Census-defined rural areas.

Note: These definitions have been adapted from definitions used by the U.S. Department of Education's National Center for Education Statistics to characterize the locations of schools. For detailed information on how they were applied to CoCs, see the About the Report section of this report.

- country were in New York City (41,549 people).
- Largely rural CoCs had more than a third of all unsheltered people in families with children (39% or 5,970 people). In largely rural CoCs, more than a fifth of people experiencing homelessness in families were unsheltered (21%).
- In major cities, only six percent of all people in families experiencing homelessness in major cities were unsheltered, and in other largely urban CoCs only five percent.
- Of major city CoCs, only one reported that more than 50 percent of people in families were

EXHIBIT 3.10: CoCs with the Largest Numbers of People Experiencing Family Homelessness
By CoC Category, 2020

CoC Name	People in Families with Children	CoC Name	People in Families with Children
Major City CoCs		Other Largely Urban CoCs	
New York City	41,549	Saint Paul/Ramsey County, MN	587
Los Angeles City & County, CA	12,416	St. Louis City, MO	423
Boston, MA	3,965	Spokane City & County, WA	363
Seattle/King County, WA	3,743	St. Petersburg, Clearwater, Largo/Pinellas County, FL	350
District of Columbia	2,431	Madison/Dane County, WI	278

Honolulu City and County, HI	1,221	Wisconsin Balance of State	1,267

unsheltered (Long Beach with 54% of people in families with children staying outside). Four largely suburban CoCs had a majority of homeless families with children staying outside: Fort Pierce, FL (77%), Vancouver, WA (54%), Imperial County, CA (52%), and Santa Cruz, CA (51%).

- Thirteen largely rural CoCs had percentages of unsheltered people in families with children exceeding 50 percent. In Jackson/West Tennessee, more than 9 in 10 people in families experiencing homelessness were unsheltered.
- CoCs that are largely suburban had a quarter (25%) of all people in families with children experiencing homelessness, slightly higher than their share of individuals experiencing homelessness (24%).

Changes over Time by CoC Category

- Family homelessness declined in three of the four CoC categories between 2019 and 2020, with major city CoCs the only category reporting increases. Family homelessness increased by three percent (or 2,533 people) in major cities. This increase was driven by increases in the unsheltered population, which increased by 79 percent (or 2,441 people).
- Sheltered homelessness decreased for families with children in nearly all CoC categories between 2019 and 2020 and stayed essentially the same in major cities. The largest drop was in largely rural CoCs, which had 1,074 fewer people in families in staying in shelters in 2020 than in 2019.
- Unsheltered family homelessness increased in largely rural CoCs (by 8%) and major city CoCs, but declined in other urban CoCs (by 11%) and largely suburban CoCs (by 10%).

Demographic Characteristics by CoC Category

- The race and ethnicity of people in families with children experiencing homelessness vary geographically. In major cities, 23 percent of people in families experiencing homelessness were white, compared with 61 percent in largely rural CoCs. More than two-thirds of people experiencing homelessness in families in major cities were African American, 68 percent, compared with 23 percent in largely rural CoCs.
- More than one-third of people in families with children experiencing homelessness in major cities were Hispanic/Latino, 36 percent, the

highest rate among the CoC categories. In largely suburban CoCs, 26 percent of people in families were Hispanic/Latino. In largely rural CoCs and other urban CoCs 18 percent of people experiencing family homelessness identified as Hispanic/Latino.

- Seven percent of people in families with children in rural areas were Native American or Pacific Islanders, compared with only two percent in major cities.
- The gender and age characteristics all people in families with children experiencing homelessness do not vary much by CoC category.

4 National Estimates Unaccompanied Homeless Youth

Data source: PIT 2017-2020

HUD's Point-in-Time (PIT) count data collection includes information on the number of young adults and children, people under the age of 25, who are experiencing homelessness "unaccompanied"—that is, without a parent or guardian present. Children and youth who experience homelessness on their own are just 23 percent of all people under the age of 25 experiencing homelessness.

In addition to not experiencing homelessness with a parent, unaccompanied youth are not themselves parents homeless together with one or more children. Thus, unaccompanied youth are a subset of the population that experiences homelessness as individuals.

EXHIBIT 4.1: PIT Estimates of Unaccompanied Homeless Youth
By Age and Sheltered Status, 2020

	Total Unaccompanied Homeless Youth		Sheltered Unaccompanied Youth		Unsheltered Unaccompanied Youth	
	#	%	#	%	#	%
Total Homeless Youth (under 25)	34,210	100%	17,271	100%	16,939	100%
Homeless Youth (under 18)	3,389	9.9%	1,682	9.7%	1,707	10.1%
Homeless Youth (18-24)	30,821	90.1%	15,589	90.3%	15,232	89.9%

EXHIBIT 4.2: Sheltered and Unsheltered Unaccompanied Homeless Youth
By Sheltered Status, 2020

On a Single Night in January 2020

- 34,210 unaccompanied youth were reported to be experiencing homelessness in the United States. These unaccompanied youth were just over six percent of the total population of people experiencing homelessness and eight percent of all people experiencing homelessness as individuals.
- Another 7,335 youth were experiencing homelessness as parents, with at least one child under the age of 18. (More detail on parenting youth is in Section 3 of this report, Homeless Families with Children.)
- Nine of every 10 unaccompanied homeless youth identified in January 2020 were between the ages of 18 and 24 (90% or 30,821 people). The remaining 10 percent (3,389 people) were children (under the age of 18) experiencing homelessness on their own.
- Just over half of unaccompanied homeless youth were unsheltered (50%), a similar percentage as people experiencing

homelessness as individuals but a higher percentage than for all people experiencing homelessness, which includes people experiencing homelessness as part of a family.

Demographic Characteristics of Unaccompanied Youth

- The characteristics of unaccompanied homeless youth differ from those of the overall population experiencing homelessness as individuals. Unaccompanied homeless youth were less likely to be white and more likely to be female than all homeless individuals.
- Just under 40 percent of unaccompanied youth experiencing homelessness were women or girls (39%). By contrast, only 29 percent of all individuals experiencing homelessness were women or girls.
- Youth identifying as transgender or as someone who does not identify as male, female, or

transgender accounted for four percent of the unaccompanied youth population, compared with one percent of the individual homeless population.

- Unaccompanied youth experiencing homelessness were slightly more likely to be African American (35%) than all individuals experiencing homelessness (34%). African American unaccompanied youth accounted for a larger share of the sheltered population of unaccompanied youth, 43 percent, than the unsheltered population, 26 percent. This is similar to the African American shares of all sheltered and unsheltered individuals.
- One-quarter of unaccompanied homeless youth were Hispanic or Latino (25%), compared with 20 percent of all homeless individuals. Hispanic youth make up a larger percentage of the unsheltered population, 29 percent.

- Multiracial youth accounted for 11 percent of all unaccompanied homeless youth, compared with 6 percent of all homeless individuals.
- Compared with all homeless individuals, unaccompanied youth were more likely to identify as a race other than white or African American (17% versus 12%).

Changes over Time

- The number of unaccompanied youth reported by communities has declined in each of the past three years. Between 2019 and 2020, the number of unaccompanied youth declined by two percent (or 828 fewer people). The overall decline resulted from decreases in both the number of unaccompanied youth in sheltered locations (3% or 437) and unsheltered unaccompanied youth (2% or 391 youth).

EXHIBIT 4.3: Demographic Characteristics of Unaccompanied Youth Experiencing Homelessness 2020

4 National Estimates Unaccompanied Homeless Youth

Data source: PIT 2020; Excludes PR and U.S. territories

- Between 2017 (the baseline year for youth experiencing homelessness in the PIT count) and 2020, there has been an 11 percent decline in the overall number of unaccompanied youth reported nationally (or 4,093 fewer youth). This reflects a seven percent decline in the number of sheltered unaccompanied youth (1,271 fewer people) and a 14 percent decline in unsheltered unaccompanied youth (2,822 fewer people).

4 Estimates by CoC

Unaccompanied Homeless Youth

Data source: PIT 2020; Excludes Puerto Rico and U.S. territories

EXHIBIT 4.8: Percentage of Unaccompanied Homeless Youth
By CoC Category and Sheltered Status, 2020

EXHIBIT 4.9: Sheltered vs Unsheltered Unaccompanied Homeless Youth
By CoC Category, 2020

On a Single Night in January 2020

- About half (50%) of all unaccompanied youth were counted in the nation's major cities. Los Angeles and New York City had the largest numbers of unaccompanied youth in the country, reporting 3,098 people and 2,418 people under the age of 25 and homeless on their own. The major cities with the next highest numbers are all on the West Coast.
- Major cities had the highest percentage of unaccompanied youth found staying in unsheltered locations (53%), followed by largely rural CoCs (50%).
- Three major city CoCs had percentages of unaccompanied youth staying in unsheltered locations exceeding 75 percent: San Jose, CA

Continuums of Care (CoC) were divided into four geographic categories

- 1. Major city CoCs (n=48)** are CoCs that contain one of the 50 largest cities in the United States. In two cases, Phoenix and Mesa, AZ, and Arlington and Fort Worth, TX, two of the largest U.S. cities are located in the same CoC.
- 2. Other largely urban CoCs (n=59)** are CoCs in which the population lives predominately in an urbanized area within the CoC's principal city or cities, but the CoCs does not include one of the nation's 50 largest cities.
- 3. Largely suburban CoCs (n=171)** are CoCs in which the population lives predominantly in suburban areas, defined as urbanized areas outside of a principal city or urban clusters within 10 miles of urbanized areas.
- 4. Largely rural CoCs (n=109)** are CoCs in which the population lives predominantly in urban clusters that are more than 10 miles from an urbanized area or in Census-defined rural areas.

Note: These definitions have been adapted from definitions used by the U.S. Department of Education's National Center for Education Statistics to characterize the locations of schools. For detailed information on how they were applied to CoCs, see the About the Report section of this report.

- (96%), San Francisco, CA (80%), and Oakland, CA (77%).
- Four largely suburban CoCs had rates of unsheltered unaccompanied youth of 95 percent or higher, and all four were in California: Marin County (97%), San Luis Obispo (97%), Santa Cruz (97%), and Imperial County (95%).
- The largely rural CoCs with the highest rates of unaccompanied youth staying in unsheltered locations were the Arkansas Balance of State CoC (95%) and the Salinas/Monterey CoC covering San Benito County in California (91%).
- In all categories of CoCs, nearly all

unaccompanied homeless youth were between the ages of 18 and 24. Largely rural CoCs and other largely urban CoCs had the highest percentages of unaccompanied homeless youth under the age of 18 (15%), and major city CoCs had the lowest percentage (8%).

- Major cities had the highest percentage of transgender or gender non-conforming unaccompanied homeless youth (5%), compared with two percent in largely rural or largely suburban CoCs.
- Unaccompanied youth found in major city CoCs were three times as likely to be black compared with unaccompanied youth in predominately rural CoCs (45% vs 14%). They were also more likely to identify as Hispanic or Latino.

Changes over Time by Coc Category

- Between 2019 and 2020, the number of unaccompanied homeless youth declined in all CoC categories except for largely suburban areas, which saw a two percent increase (174 more people). This increase was driven by a six percent increase in the number of unsheltered youth experiencing homelessness in those CoCs (190 people).
- While partially offset by moderate increases in the numbers of unaccompanied youth in Los Angeles, Kansas City, and New York, there was a considerable drop reported by Las Vegas (from 737 people in 2019 to 42 people in 2020) driving the overall decline in the major cities category.
- The number of youth experiencing sheltered homelessness decreased across all CoC types

5 National Estimates Homeless Veterans

Data source: PIT 2009–2020

**EXHIBIT 5.1: PIT Estimates of Homeless Veterans
By Sheltered Status, 2009–2020**

On a Single Night in January 2020

- 37,252 veterans were experiencing homelessness in the U.S., eight percent of all homeless adults.
- Of every 10,000 veterans in the United States, 21 were experiencing homelessness.
- Nearly all veterans were experiencing homelessness as individuals, 98 percent. Of those individuals, 27 percent (9,794 veterans) had chronic patterns of homelessness.
- Fewer than six in 10 veterans experiencing homelessness were staying in sheltered locations (59% or 22,048 veterans). This is higher than the share of all individuals experiencing homelessness who were sheltered, only 49 percent.
- A very small share of veterans experiencing homelessness, 828 people or two percent, were

in 814 family households with children. A few veterans were in households without children but with more than one adult. Overall, 40,897 people experiencing homelessness were in households that included a veteran.

Changes in Veteran Homelessness over Time

- Between 2019 and 2020, the number of veterans experiencing homelessness increased by less than one percent (167 more people). The increase was entirely among veterans staying in unsheltered places (859 more veterans).
- However, in 2020 36,115 fewer veterans were experiencing homelessness than in 2009, when these data were first reported, a drop of nearly 50 percent.
- Fewer veterans were found in both sheltered and unsheltered locations in 2020 than in 2009.

Between 2009 and 2020, both sheltered and unsheltered veteran homelessness dropped by almost half (49%) a reduction of 21,361 sheltered veterans and 14,754 unsheltered veterans.

- The share of adults experiencing homelessness who were veterans also continued a steady decline. In 2020, veterans represented less than eight percent of adults experiencing homelessness, down from 12 percent in 2013 – the first-year data were collected on the age of people experiencing homelessness at a point-in-time.

Demographic Characteristics

- Men accounted for more than nine of every ten veterans experiencing homelessness in 2020 (91% or 33,862 veterans), the same as the share of all veterans in the U.S., which is also 91 percent.
- Women veterans experiencing homelessness were much more likely to be in a household with a child under 18 years of age (12%) than their male counterparts (1%).
- In contrast to the population of homeless individuals, in which women were more likely to be sheltered, women veterans experiencing

homelessness were more likely to be found in unsheltered locations than their male counterparts (47% vs. 40%).

- A higher percentage of veterans experiencing homelessness were white (57%) than of all people experiencing homelessness (48%) or individuals experiencing homelessness (54%).
- African Americans were considerably overrepresented among the homeless veteran population. Veterans who were black or African American comprised one-third of veterans experiencing homelessness and a quarter of veterans experiencing unsheltered homelessness compared with 12 percent of all U.S. veterans. Conversely, while 57 percent of veterans experiencing homelessness were white, they were underrepresented compared to their share of all U.S. veterans (81%).
- The number of veterans experiencing homelessness who identify as Hispanic/Latino was considerably smaller than the percentage of Hispanic/Latinos among people experiencing homelessness as individuals (11% vs. 20%), although higher than the share of all U.S. veterans who were Hispanic/Latino (7%).
- The percentage of all Hispanic or Latino veterans experiencing homelessness who were

counted outdoors (55%) was higher than the percentage of white veterans (42%) or black veterans (31%).

who were men rose by one percent (370 veterans). The increase in the number of male veterans, resulted entirely from the increase in unsheltered veterans (by 938 veterans or 7%).

Changes in Demographics over Time

- The increase in the number of veterans experiencing homelessness between 2019 and 2020 largely reflected an increase in veterans experiencing unsheltered homelessness who were white, non-Hispanic/non-Latino men, followed by black men.
- The number of Hispanic or Latino veterans experiencing homelessness declined between 2019 and 2020, by four percent, while the number of non-Hispanic veterans increased by one percent. The number of veterans who were not Hispanic or Latino and were staying in unsheltered locations increased by 1,002 people, or eight percent.
- The number of veterans experiencing homelessness who were women declined by five percent (or 166 veterans), while the number

5 State Estimates Homeless Veterans

Data source: PIT 2009-2020

**EXHIBIT 5.5: Estimates of Homeless Veterans
By State, 2020**

On a Single Night in January 2020

- California accounted for 31 percent of all veterans experiencing homelessness in the United States (11,401 veterans) and more than half of all unsheltered veterans (53% or 7,996 veterans).
- Seven in ten veterans experiencing homelessness in unsheltered locations were in four states: California (53%), Florida (6%), Texas (6%), and Washington (5%).
- In four states, more than half of all veterans experiencing homelessness were unsheltered: California (70%), New Mexico (55%), Oregon (51%), and Georgia (51%).
- California, Hawaii, and Oregon had the highest rates of homelessness among all veterans, far exceeding the national rate of 21 of every 10,000 veterans. The highest rate was in California, where 77 of every 10,000 veterans were experiencing homelessness, followed by Hawaii and Oregon (54 and 50 of every 10,000 veterans).

- In 14 states, 90 percent or more of homeless veterans were staying in sheltered locations. States with very small percentages of homeless veterans who were unsheltered were New York (3%) and Massachusetts (4%).

Changes over Time

- Veteran homelessness decreased in 28 states between 2019 and 2020. Oregon, North Carolina, and Tennessee had the largest absolute decreases, with 109 fewer veterans experiencing homelessness in each state. The largest percentage decrease was in Utah (46%), followed by South Dakota (35%), and West Virginia (24%).
- The number of veterans experiencing homelessness increased in 19 states and the District of Columbia between 2019 and 2020. The largest absolute increases were in California (421 more veterans or 4%). The largest percentage increase (and second largest absolute increase) was in Nevada, which saw

2020

an increase of 250 veterans experiencing homelessness between 2019 and 2020 (a 37% rise). The next largest percentage increase was in Delaware (20%).

- Since 2009, the number of veterans experiencing homelessness has increased in only two states: Oregon (by 52 people), and Vermont (by 10 people).
- Between 2009 and 2020, the number of veterans experiencing homelessness decreased in 48 states plus the District of Columbia, with the largest absolute decreases in California (6,572 fewer veterans), Florida (4,699), and New York (4,628). States with large percentage decreases were Louisiana (81%), Mississippi (81%), and New York (79%).

5 Estimates by CoC Homeless Veterans

Data source: PIT 2009-2020; Excludes Puerto Rico and U.S. territories

EXHIBIT 5.8: Percent of Homeless Veterans By CoC Category and Sheltered Status, 2020

EXHIBIT 5.9: Sheltered vs. Unsheltered Veterans in each CoC Category 2020

On a Single Night in January 2020

- Veterans were less likely than all people experiencing homelessness to be in major cities and more likely to be in suburban areas. Major city CoCs accounted for nearly half of the homeless veterans nationwide (49%), a slightly smaller share than all individuals experiencing homelessness (52%). Conversely, CoCs that were largely suburban accounted for just over one-quarter (26%) of homeless veterans, slightly higher than the 23 percent share for all individuals.
- Los Angeles and San Diego had the largest number of veterans experiencing homelessness, with 3,681 (or 10%) and 940

Continuums of Care (CoC) were divided into four geographic categories

1. **Major city CoCs (n=48)** are CoCs that contain one of the 50 largest cities in the United States. In two cases, Phoenix and Mesa, AZ, and Arlington and Fort Worth, TX, two of the largest U.S. cities are located in the same CoC.
2. **Other largely urban CoCs (n=59)** are CoCs in which the population lives predominately in an urbanized area within the CoC's principal city or cities, but the CoCs does not include one of the nation's 50 largest cities.
3. **Largely suburban CoCs (n=171)** are CoCs in which the population lives predominantly in suburban areas, defined as urbanized areas outside of a principal city or urban clusters within 10 miles of urbanized areas.
4. **Largely rural CoCs (n=109)** are CoCs in which the population lives predominantly in urban clusters that are more than 10 miles from an urbanized area or in Census-defined rural areas.

Note: These definitions have been adapted from definitions used by the U.S. Department of Education's National Center for Education Statistics to characterize the locations of schools. For detailed information on how they were applied to CoCs, see the About the Report section of this report.

- homeless veterans (or 3%).
- About 17 percent of homeless veterans were counted in largely rural CoCs, and eight percent were counted in other largely urban CoCs, similar to the percentage of all individuals experiencing homelessness.
- The five major city CoCs with the highest percentages of homeless veterans staying in unsheltered locations were in California, and all had unsheltered rates greater than 70 percent. Los Angeles had the highest percentage unsheltered, 76 percent.
- The five largely suburban CoCs with the highest percentages of veterans staying in

unsheltered locations had higher rates than any CoCs in the other three categories, with all five exceeding 80 percent. In Imperial County, CA and San Luis Obispo, CA, more than 95 percent of veterans were staying outside (98% and 96%).

- Among largely rural CoCs. New Mexico Balance of State and Hawaii Balance of State, had the highest percentages of homeless veterans who were unsheltered (75% and 74%).

The number of veterans experiencing homelessness declined by nearly 50 percent since 2009.

5 Estimates by CoC Homeless Veterans

Data source: PIT 2009-2020

Changes over Time by CoC Category

- Across all CoC categories, the number of veterans experiencing homelessness remained essentially the same between 2019 and 2020. In major cities, the number of veterans increased only slightly, by 116 people or one percent. Similarly, the number of veterans experiencing homelessness increased by 100 people in largely rural CoCs (a 2% rise). Other urban CoCs saw a 50 person decline, and largely suburban CoCs reported no change in homeless veterans.
- The number of veterans staying in sheltered locations declined across all CoC types. These declines were offset by increases in the numbers of unsheltered veterans across all CoC types. The largest increases among unsheltered veterans were observed in major cities (413 people or 5%) and largely rural CoCs (253 people or 10%).

6 National Estimates Chronically Homeless Individuals

Data source: PIT 2007–2020

**EXHIBIT 6.1: PIT Estimates of Chronically Homeless Individuals
By Sheltered Status, 2007–2020**

On a Single Night in January 2020

- 110,528 people experiencing homelessness as individuals in January 2020 were reported to have chronic patterns of homelessness, just over one-quarter of all homeless individuals. This is the first time since 2011 that the number of people with chronic patterns of homelessness exceeded 100,000.

- Two thirds of individuals with chronic patterns of homelessness were counted in unsheltered locations (66% or 73,417 people), a higher unsheltered rate than for all individuals (51%).

Changes over Time

- The number of individuals with chronic patterns of homelessness increased for the

**EXHIBIT 6.2: Change in Numbers of Chronically Homeless Individuals
By Sheltered Status, 2007–2020**

	Change 2018–2019		Change 2010–2019		Change 2007–2019	
	#	%	#	%	#	%
Total Chronically Homeless Individuals	14,387	15.0%	4,466	4.2%	-9,285	-7.7%
Sheltered Chronically Homeless Individuals	1,911	5.4%	-6,218	-14.4%	-4,657	-11.1%
Unsheltered Chronically Homeless Individuals	12,476	20.5%	10,684	17.0%	-4,628	-5.9%

fourth consecutive year. The increase between 2019 and 2020 was 14,387 people, or fifteen percent.

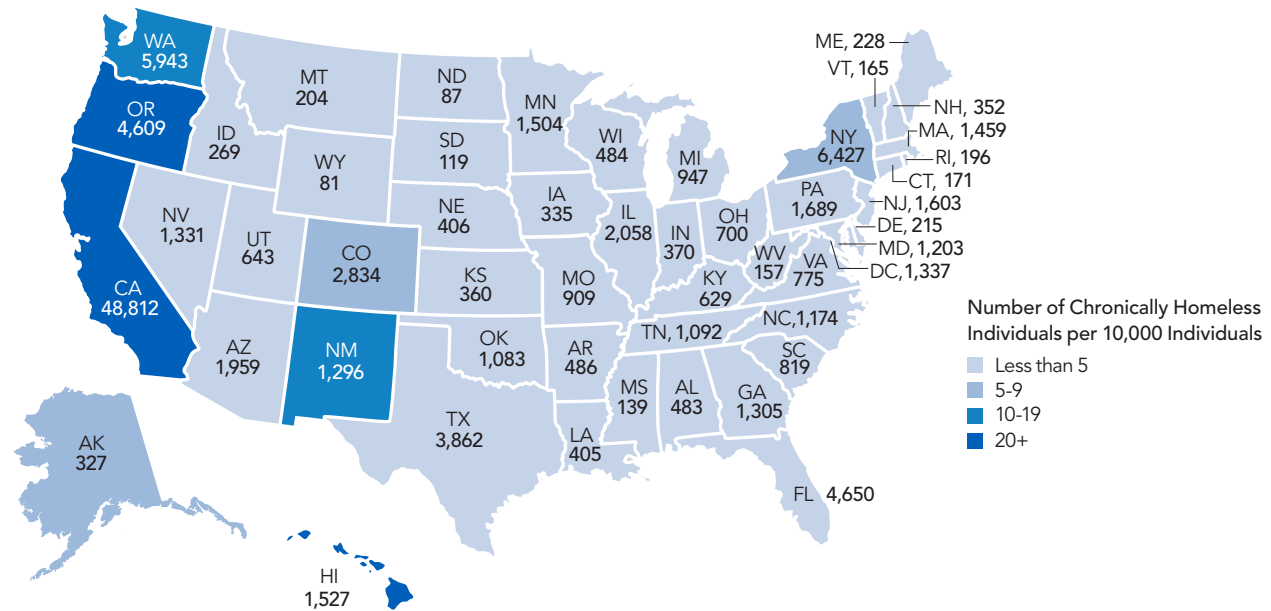

- This most recent increase was driven by increases among the unsheltered population (21% or 12,476 more people).
- The 15 percent increase in individuals with chronic patterns of homelessness between 2019 and 2020 was greater than for all individuals experiencing homelessness, three percent.
- Over the longer period, 2007 to 2020, the number of individuals experiencing chronic homelessness dropped by eight percent (9,285 fewer people). However, the number of chronically homeless individuals in 2020 is the highest recorded since 2009 and the third highest number since 2008 (120,115 individuals) and 2007 (119,813 individuals).
- The share of all individuals experiencing homelessness who had chronic patterns of homelessness declined from 29 percent of all individuals experiencing homelessness in 2007 to a low of 22 percent in 2016. Since that time, the share of individuals with chronic patterns of homelessness has risen steadily and was 27 percent in 2020.

6 State Estimates Chronically Homeless Individuals

Data source: PIT 2007-2020; Excludes Puerto Rico and U.S. territories

**EXHIBIT 6.3: Estimates of Chronically Homeless Individuals
By State, 2020**

On a Single Night in January 2020

- Four of every 10 individuals with chronic patterns of homelessness in the United States were in California (48,812 people). Among those who were unsheltered, more than half (56%) were in California.
- In ten states, more than two-thirds of chronically homeless individuals were staying in unsheltered locations: California (84%), Arkansas (78%), Hawaii (78%), Oregon (77%), Montana (76%), Mississippi (75%), Arizona (74%), Wyoming (70%), Texas (70%), Florida (69%), and Georgia (68%).
- The extent to which individuals experiencing homelessness have chronic patterns varies by state. The highest rate was in New Mexico where over half of individuals experiencing homelessness had chronic patterns (51%). Other states with chronic patterns higher than the national average of 27 percent of all individuals were: Colorado (37%), Washington (37%), California (36%), Oregon (34%), New Hampshire (34%), and Oklahoma (34%). The

District of Columbia also had a high rate (34%).

Changes over Time

- Thirty-six states experienced an increase in the number of individuals with chronic patterns of homelessness between 2019 and 2020. California had the largest increase by far: in 2020, 9,537 more chronically homeless individuals were counted than in 2019. The next largest absolute increase was in Washington, where 1,497 more chronically homeless individuals were counted than in 2019. Nevada had the largest percentage increase (96%, or 652 individuals), followed by New Hampshire (87%, or 164 more individuals).
- Fourteen states and the District of Columbia experienced a decrease in the number of individuals with chronic patterns of homelessness between 2019 and 2020. The largest absolute decreases occurred in Florida, where 531 fewer people were chronically homeless in 2020 than in 2019 and Oregon, with 486 fewer people. The largest percentage

State Estimates Chronically Homeless Individuals

Data source: PIT 2007-2020; Excludes Puerto Rico and U.S. territories

decreases were in Mississippi (36%) and Arkansas (28%).

- Between 2007 and 2020, 27 states and the District of Columbia recorded decreases in chronic homelessness, 10 states fewer than in the time between 2007 and 2019. Texas experienced the largest decline in the number of chronically homeless individuals, with 4,069 fewer chronically homeless individuals counted in 2020 than in 2007. Florida had the next absolute largest decline, with 2,813 fewer chronically homeless individuals. West Virginia and Connecticut had the largest percentage declines (86% and 83%) over this longer period.
- Of the 23 states that experienced increases in the number of individuals with chronic patterns of homelessness between 2007 and 2020, the largest absolute increase occurred in California, with 8,471 more chronically homeless individuals in 2020 than in 2007. Other states with large absolute increases were Washington (3,340 more chronically homeless individuals) and Oregon (1,294). In six states, the number of chronically homeless individuals has more than doubled over the longer period: Idaho (183% more individuals with chronic patterns of homelessness), Montana (146%), Maine (135%), Washington (128%), Kansas (126%), and Wyoming (113%).

6 Estimates by CoC

Chronically Homeless Individuals

Data source: PIT 2007-2020, Excludes Puerto Rico and U.S. territories

EXHIBIT 6.6: Individuals with Chronic Patterns of Homelessness
By CoC Category and Sheltered Status, 2020

EXHIBIT 6.7: Sheltered vs. Unsheltered Individuals with Chronic Patterns of Homelessness
By CoC Category, 2020

On a Single Night in January 2020

- More than half (57%) of individuals with chronic patterns of homelessness were counted in CoCs that include one of the nation's 50 largest cities, 52 percent of all those in sheltered locations and 59 percent of those who were unsheltered.
- Chronic homelessness is more concentrated in the nation's largest cities than individual homelessness overall, with 52 percent of all people experiencing homelessness as individuals found in major city CoCs and 54 percent of those in unsheltered locations.

Continuums of Care (CoC) were divided into four geographic categories

- Major city CoCs (n=48)** are CoCs that contain one of the 50 largest cities in the United States. In two cases, Phoenix and Mesa, AZ, and Arlington and Fort Worth, TX, two of the largest U.S. cities are located in the same CoC.
- Other largely urban CoCs (n=59)** are CoCs in which the population lives predominately in an urbanized area within the CoC's principal city or cities, but the CoCs does not include one of the nation's 50 largest cities.
- Largely suburban CoCs (n=171)** are CoCs in which the population lives predominantly in suburban areas, defined as urbanized areas outside of a principal city or urban clusters within 10 miles of urbanized areas.
- Largely rural CoCs (n=109)** are CoCs in which the population lives predominantly in urban clusters that are more than 10 miles from an urbanized area or in Census-defined rural areas.

Note: These definitions have been adapted from definitions used by the U.S. Department of Education's National Center for Education Statistics to characterize the locations of schools. For detailed information on how they were applied to CoCs, see the About the Report section of this report.

- Largely rural CoCs had a smaller share of individuals with chronic patterns of homelessness than of all individuals experiencing homelessness, 14 vs. 18 percent.
- Los Angeles had, by far, the largest number of individuals with chronic patterns of homelessness in the country (23,075 people or 21% of the national total). New York City had the second largest number of chronically homeless individuals, 5,524 people (or 5% of the total). In Los Angeles, more than 9 in 10 chronically homeless individuals are unsheltered, while in New York City only about a quarter (24%) are unsheltered.

EXHIBIT 6.8: CoCs with the Largest Numbers of Chronically Homeless Individuals
By CoC Category, 2020

CoC Name	Chronically Homeless Individuals	CoC Name	Chronically Homeless Individuals
Major City CoCs		Other Largely Urban CoCs

San Bernardino City & County, CA	750	New Mexico Balance of State	765
Stockton/San Joaquin County, CA	734	Hawaii Balance of State	631

- Urban CoCs without one of the nation’s largest cities had the lowest unsheltered rate of the four types of CoCs, 54 percent. In the three other types of CoCs, roughly two-thirds of individuals with chronic patterns of homelessness are unsheltered.
- In the largely suburban CoC of Massachusetts Balance of State and the largely rural CoC of Indiana Balance of State, no individuals found in unsheltered locations had chronic patterns or homelessness.
- While major cities in California were among those with high unsheltered rates for individuals with chronic patterns of homelessness, Columbus OH and Houston TX also had unsheltered rates greater than 80 percent. For Columbus, the overall number of individuals with chronic patterns of homelessness was not large, 177 people.

Changes over Time by CoC Category

- Major city CoCs experienced the largest increase in individuals with chronic patterns of homelessness between 2019 and 2020 (10,938 more people or 21%). Most of this increase (10,438 more people) was among unsheltered chronically homeless individuals.
- In 2020, the number of unsheltered chronically homeless individuals in major cities was the highest number recorded since data collection started in 2007, with 42,843 individuals.
- Largely suburban CoCs had the second largest increase (2,641 more individuals with chronic patterns or 12%). This increase was driven by rises in both sheltered and unsheltered individuals (1,027 more sheltered and 1,614 more unsheltered).
- The number of individuals with chronic patterns of homelessness who were in shelters during the point-in-time count increased in

7 Inventory of Beds in the United States

Data source: HIC 2007–2020

EXHIBIT 7.1: Project Types for Homeless and Formerly Homeless People

SHELTER FOR HOMELESS PEOPLE

Emergency Shelter (ES): provides temporary or nightly shelter beds to people experiencing homelessness

Transitional Housing (TH): provides homeless people with up to 24 months of shelter and supportive services

Safe Haven (SH): provides temporary shelter and services to hard-to-serve individuals

PERMANENT HOUSING FOR FORMERLY HOMELESS PEOPLE

Rapid Rehousing (RRH): provides short-term rental assistance and stabilizing services to formerly homeless people

Permanent Supportive Housing (PSH): provides long-term housing with supportive services for formerly homeless people with disabilities, and often those with chronic patterns of homelessness

Other Permanent Housing (OPH): provides housing with or without services that is specifically for formerly homeless people but that does not require people to have a disability

Types of Programs in the National Inventory

Communities across the country submit data each year on their residential programs for people experiencing homelessness and their programs that help people leave homelessness. The two basic types of programs are those that provide shelter and temporary accommodations (emergency shelter, transitional housing, and safe havens), and those that provide permanent housing (rapid rehousing, permanent supportive housing, and other permanent housing).

1. **Shelter** is intended to serve people currently experiencing homelessness and is comprised of two main types of programs, emergency shelters (ES) and transitional housing programs (TH). Conceptually, ES is shorter-term and provides less intensive services than TH.⁵ Shelter also includes a small number of programs for hard-to-serve individuals called safe havens (SH).

⁵ Some transitional housing programs provide housing in which the individual or family may be able to stay after the transitional period with intensive services ends (sometimes called “transition-in-place”), and some emergency shelters have intensive services. Communities decide how to categorize their programs when reporting data to HUD.

EXHIBIT 7.2: Distribution of Bed Inventory By Type, 2020

Note: a small percentage of safe haven beds (0.3%) are in the national inventory, but not included in the exhibit.

2. **Permanent housing** is intended to serve people who were homeless at the time they were admitted to a program. Once they enter the program, they are in housing that is permanent in the sense that they have a lease (or similar agreement) and may be able to stay in the same housing unit long-term. This category includes rapid rehousing (RRH), a short-term subsidy in which the individual or family may be able to remain after the subsidy ends; permanent supportive housing (PSH),

EXHIBIT 7.3: Inventory of Beds for Homeless and Formerly Homeless People
2007–2020

Note: The small share of Safe Haven beds (0.3%) is not included in this exhibit.

housing with supportive services for formerly homeless people with disabilities; and other permanent housing (OPH), which also is intended for people leaving homelessness but is not restricted to people with disabilities.

formerly homeless people, and somewhat less than half, 42 percent, provided shelter for people currently experiencing homelessness.

The National Inventory as of January 2020

- A total of 941,871 beds were dedicated to serving homeless or formerly homeless people in communities across the nation.
- Somewhat more than half of the beds, 58 percent, were for permanent housing for

- Of the 396,149 beds for people currently experiencing homelessness, 76 percent were in emergency shelters, and 23 percent were in transitional housing programs. Less than one percent (0.6%) were provided through safe havens.
- Of the 545,722 beds in programs that help people leave homelessness, 68 percent were in permanent supportive housing, 23 percent were in rapid re-housing programs, and nine percent were in other permanent housing.

Inventory of Beds in the United States

Data source: HIC 2007–2020

EXHIBIT 7.4: Change in National Inventory of Beds for Homeless Shelter and Permanent Housing Projects 2007-2020

	Change 2019-2020		Change 2007-2020	
	#	%	#	%
Total Beds	30,214	3.3%	330,579	54.1%
Emergency Shelter	9,752	3.3%	90,138	42.6%
Transitional Housing	-3,188	-3.3%	-118,947	-56.3%

Permanent Supportive Housing	3,737	1.0%	184,394	97.8%
Other Permanent Housing	10,023	25.1%		

Changes to the National Inventory, 2007-2020

- Much of the growth in the national inventory has been in permanent supportive housing for formerly homeless people, with the number of beds in 2020 nearly double the number in 2007, 184,394 more beds.
- During the same period, the number of beds in emergency shelters or transitional housing programs dropped by eight percent. All of the

decrease was in transitional housing, with 115,759 fewer beds in 2020 than in 2007, a 56 percent decrease. The number of beds in emergency shelter rose by 43 percent or 90,138 beds.

- Communities began reporting data on rapid rehousing programs in 2013, when rapid rehousing was a relatively new program model. Since that time, the number of beds in rapid rehousing increased almost fivefold and reached almost 123,000 beds.

Recent Changes to the National Inventory

- Permanent supportive housing continued to grow between 2019 and 2020, but only by one percent or 3,737 beds. Other permanent

housing saw a more marked increase in the most recent year, growing by 25 percent or more than 10,000 beds.

- Emergency shelter beds also continued to increase between 2019 and 2020, while beds in transitional housing programs continued to drop, by more than 3,000 beds or three percent.
- Rapid rehousing also continued to grow between 2019 and 2020, by nine percent, or almost 10,000 beds.

Beds Serving Individuals and Families in 2020

Just as this report has separate sections on families (households with at least one adult and one child under 18) and on individuals (homeless people who are not part of a family), communities report on their program inventory in those categories.

- Emergency shelter beds were about evenly split between beds intended for families (48%) and beds for people experiencing homelessness as individuals (51%). Less than one percent were for people experiencing homelessness as children under 18 without a parent present.
- Similarly, 52 percent of transitional housing beds were targeted to individuals and 47

percent to families. Less than 1 percent were for child-only households.

- While rapid re-housing was originally designed as an intervention for families experiencing homelessness, it has increasingly been used by communities to provide permanent housing to individuals as well. As of 2020, almost three-quarters (72%) of rapid re-housing beds were targeted to people in families, and more than a quarter (28%) of beds were for individuals. Individuals usually are homeless on their own, while rapid re-housing for families requires multiple beds, so the share of rapid re-housing units for individuals is greater.
- Two-thirds of permanent supportive housing beds were for individuals. Individuals were more likely to have had chronic patterns of homelessness in 2020 (27% of individuals compared to 6% of families). However, about a third of PSH beds (34%) are targeted to families. Again, it is important to keep in mind the distinction between beds and housing units.
- The percentage of other permanent housing—beds without a restriction to people with disabilities—reported by communities to be for families is even higher, 57 percent.

Inventory of Beds in the United States

Data source: HIC 2007–2020

EXHIBIT 7.7: Inventory of PSH Beds for Chronically Homeless People 2007-2020

Beds Targeted to Veterans and Youth

- Fifteen percent of all beds in the national inventory (138,558 beds in total) were dedicated to veterans experiencing homelessness and their family members. More than three in four beds for veterans (76%) were in permanent supportive housing projects. Although the number of safe haven beds was small (2,302 beds in total), more than half were dedicated to veterans.
- In 2020, 27,244 beds were for unaccompanied youth or for families with young parents (all members of the household are under the age of 25). Of these beds, 58 percent were for youth currently experiencing homelessness, with 35 percent in transitional housing projects and 23 percent in emergency shelters. Overall, beds targeted to youth represented only three percent of the total inventory of beds available for people experiencing homelessness.
- The total number of beds dedicated to veterans continued to increase between 2019 and 2020 across all project types, by 3,982 beds overall or three percent. The total number of beds for youth also increased, by 3,534 beds. In this case, the percentage increase was substantial, 15 percent.

Beds Targeted to Individuals with Chronic Patterns of Homelessness

- Permanent supportive housing programs may dedicate all or a portion of their beds to people with chronic patterns of homelessness, and (if funded by the federal government) must serve people with disabilities. In 2020, 48 percent of beds in PSH programs (179,569 of the 373,030 total beds) were for people experiencing chronic homelessness.
- The number of PSH beds for people with chronic patterns of homelessness was 4 times greater in 2020 than in 2007, when these data were first collected (a 375% increase).

EXHIBIT 7.8: Distribution of Beds By Type and CoC Category, 2020*

*Excludes SH, which accounts for between 0.1 and 0.3% of beds across the four CoC categories.

Beds by CoC Category, 2020

Continuums of Care (CoC) were divided into four geographic categories

1. **Major city CoCs (n=48)** are CoCs that contain one of the 50 largest cities in the United States. In two cases, Phoenix and Mesa, AZ, and Arlington and Fort Worth, TX, two of the largest U.S. cities are located in the same CoC.
2. **Other largely urban CoCs (n=59)** are CoCs in which the population lives predominately in an urbanized area within the CoC's principal city or cities, but the CoCs does not include one of the nation's 50 largest cities.
3. **Largely suburban CoCs (n=171)** are CoCs in which the population lives predominantly in suburban areas, defined as urbanized areas outside of a principal city or urban clusters within 10 miles of urbanized areas.
4. **Largely rural CoCs (n=109)** are CoCs in which the population lives predominantly in urban clusters that are more than 10 miles from an urbanized area or in Census-defined rural areas.

Note: These definitions have been adapted from definitions used by the U.S. Department of Education's National Center for Education Statistics to characterize the locations of schools. For detailed information on how they were applied to CoCs, see the About the Report section of this report.

- The distribution of beds for people currently experiencing homelessness varies modestly across categories of CoCs. All types of communities had many more emergency shelter beds than transitional housing beds in 2020. The difference was greatest in major city CoCs, where 81 percent of beds for people experiencing homelessness were in emergency shelters, and only 19 percent in transitional housing programs. Largely rural CoCs had the highest percentage of transitional housing

beds, accounting for 28 percent of bed for people experiencing homelessness and 72 percent were emergency shelter beds.

- Across all CoC categories, permanent supportive housing was the dominant type of permanent housing for formerly homeless people. Major cities and other urban areas had the highest percentage of PSH beds among permanent housing inventory, both with 71 percent.
- Rapid re-housing beds were a relatively larger share of permanent housing beds in rural CoCs than across all categories of CoCs (35% vs. 22%), RRH also comprises a relatively large share of the total inventory of residential programs for current and formerly homeless people in rural areas, 18 percent compared to 13 percent across all geographic categories of CoCs.
